### **DETAILED ACTION**

Applicant is hereby notified that the required timing for the correction of drawings has changed. See the last 6 lines on the sheet which is attached entitled "Attachment for PTO-948 (Rev. 03/01 or earlier)". It is noted that a PTO Form 948 was mailed herewith. Due to the above notification Applicant is required to submit drawing corrections within the time period set for responding to this Office action. Failure to respond to this requirement may result in abandonment of the instant application or a notice of a failure to fully respond to this Office action.

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20, drawn to a programmable molecular device including a nano-network, classified in class 703, subclass 13.
- II. Claims 21-42, drawn to a method of making an electronic component including providing a nanocell, which is also programmed to function as an electronic component, classified in class 700, subclass 95.
- III. Claims 43-54, drawn to a molecular computer containing a plurality of programmable nanocells interconnected with a plurality of metallic wires, classified in class 708, subclass 1.
- IV. Claims 55 and 56, drawn to a method of making a computer with trained nanocells which are allowed to train untrained nanocells, classified in class 700, subclass 121.

The inventions are distinct, each from the other because of the following reasons:

Art Unit: 1631

The inventions of Groups I – IV are each directed to distinct and different device and corresponding method practices as summarized for each Group above and further discussed herein. The invention of Group I is directed to programmable devices wherein nano-networks are utilized with input and output leads apparently in order to be programmable. Group I lacks any limitation which requires electronic function per se. In contrast the Group II invention is a method of making which utilizes nanocells that are specifically programmable to function as an electronic component. Group I also lacks any programmable or trained nanocells as required in Groups III and IV. Groups III and IV also lack the requirement of electronic function per se as in Group II. Groups III and IV are distinct in that Group IV requires trained nanocells which train untrained nanocells which is lacking in Group III. Additionally Group IV lacks any of the metallic wiring, nanoparticles, etc. as required in Group III. In summary, each of Groups I – IV are directed to distinct subject matter which would require separate and thus undue search burden if any two Groups were searched together due to the non-overlapping subject matter as summarized above and thus support this restriction requirement.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the PTO Fax Center located in Crystal Mall 1.
